

Configuration i-record tool

The configuration and maintenance of automatic door systems is a daily challenge for installers and service technicians. Making complete and standard-compliant settings with missing or outdated instructions can complicate this task. With its structured and clearly arranged user interface the intuitive i-record app supports the technician in this task. Installed on a Android based tablet or smartphone, i-record gives authorised users wire-free, instant and secure access to their door systems.

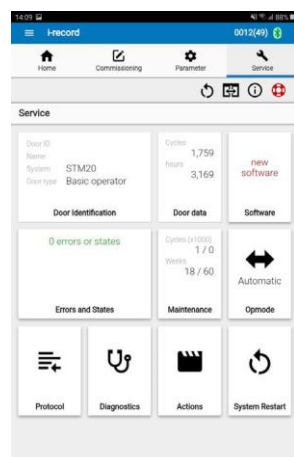

Key features of i-record:

- Intuitive layout makes for an easy user experience
- Full mobility thanks to wireless connection to the door control
- System-based guiding through the configuration and commissioning process
- Extensive diagnostic functions and troubleshooting capabilities
- Help button for direct request of record-usa Tech Support
- Automatic download of licences and software updates
- Remote support and remote access
- Track door data to assist in planned maintenance needs

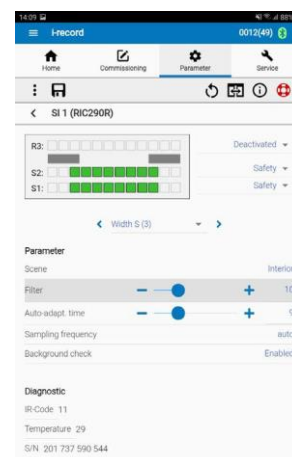

Smart Device as a modern work tool

The SmartLynk Dongle is the interface to the door controller. SmartLynk can be shared within a pool. For optimal flexibility one tablet and one SmartLynk per user is recommended. Ordering information can be found at www.recorddoors.com or contact record-usa for further details.

Service screen with information for analysis and functions to maintain the door system.

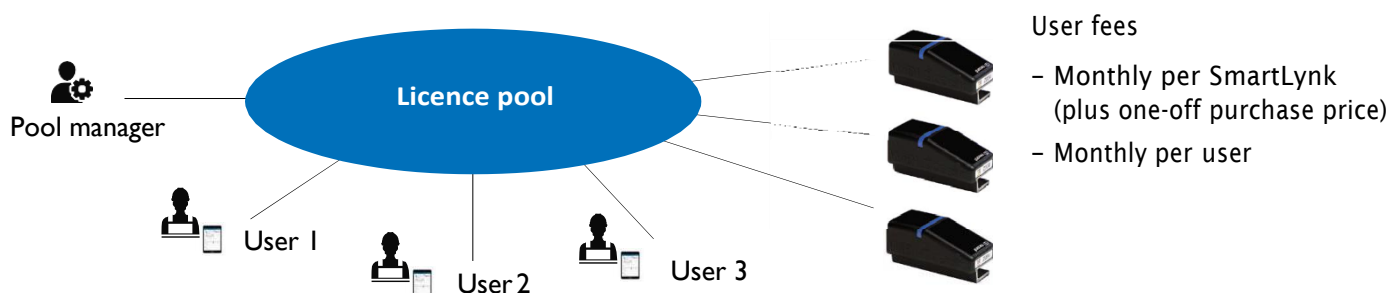

Parameter screen with visualised detection field in the Sensor Settings section.

Configuration tool i-record

Bluetooth® SmartLynk Dongle and licences

Parameters and functions can be conveniently reviewed and changed when the SmartLynk is connected. Status and diagnostic information can be read by touch input. At the same time, the software automatically checks for available software updates for components. You can work off-line with the app during a certain period. Once the app is online with the record server again, licence information is updated and the latest software packages for SmartLynk and door systems are downloaded.

Example of a licence pool with three users and three SmartLynks.

Security first

The registration of users and SmartLynks in an administrated licence pool enables the controlled use of this tool. Customisable user roles and licence checking protect against unauthorised access to the automatic door.

- Login with e-mail and password same as the one used for the record web site
- Users can share WiDIs belonging to the same licence pool
- Assign a licence for each combination of user and SmartLynk
- Renewal of licences/door accesses when connected to the record server

Innovation at reasonable prices

The use of i-record is subject to a fee. This includes a powerful tool, software updates for the app and record door systems and hosting of the web-based user administration. In this way we ensure that we can offer you a product and service which meets the technical standards and legal requirements. A monthly user fee per user and per SmartLynk is automatically charged by credit card.

The i-record app can be downloaded free of charge from the Google Play Store for the Android operating system from version 5.1.1.
